

Decision tree: Where each piece of a report belongs

Where does this
piece of the
report belong?

a reusable
analytical choice

params: in the YAML header

read in code and prose as `params$name`
a render can override the default

exact values
shown by a map

knitr::kable()

in a chunk labeled `tbl-something` with a `tbl-cap`,
referred to in the prose as `@tbl-something`

the sources the
map rests on

bibliography: in the YAML header

cite the data, the software and the boundary
layers, so that the report can be checked

one report for
each member of a set

walk() over quarto_render()

`execute_params` = takes a named list that overrides
the header, while `output_file` = names the result
